PLANTING INSTRUCTIONS FOR FOOD PLOTS

Site Selection: When planting Rackmaster® products, pick out an area close to your favorite hunting spot.

Planting Dates:

Zones A, B and E: Sept. 15th - Nov. Jan. 15th - Mar. 15th

Zones C, D and F: Aug. 15th - Oct. Mar. 1st - May

Planting Method: Prepare a smooth, firm seedbed by plowing and dragging the soil. This will remove all vegetation and debris from the site, thus eliminating competition. Fertilizer and lime can be applied during this step so it can be worked into the soil. Broadcast the seed at the recommended rate evenly across the area and use a light drag or cultipacker to cover the seed. Making good seed/soil contact is the key to establishing a productive food plot.

Soil Test/Fertility: Apply lime and fertilizer according to soil test recommendations. Maintain pH between 6.0 and 7.0 for optimum results.

Pennington Seed is proud to offer seed to improve your wildlife habitat. Our varieties and various mixes have been field tested for many years on the Pennington wildlife preserve and are the finest products on the market today.
