DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read the entire panel before using this product.

Precautions:

- Keep children and pets away from treated areas until spray has dried.
- Avoid contamination of food.
- Do not contaminate water supplies.

When to use:

Apply to actively growing weeds, preferably before the seed heads form. Completely spray the foliage of the weeds and grasses you want to kill until thoroughly wet. It's best to apply on a warm sunny day when daytime temperatures are above 60° F. Weed control is accelerated by warm sunny weather. Apply when the wind is calm. Rain or watering 2 hours after application will not wash away effectiveness. Most treated weeds usually show initial symptoms in 2-4 days and complete kill in 1-2 weeks. Hard-to-control weeds may require a second application if not completely dead in 4 weeks.

How to use:

This product is formulated for "spot" treatment of individual weeds and grasses or for treatment of large areas as, instructed on this label (see specific site areas below). Apply with a plastic, aluminum or stainless steel tank-type sprayer.

Do not apply with galvanized or unlined steel sprayer, or through any irrigation system or sprinkling can.

Use a tank-type sprayer with a coarse spray nozzle for spot treatments. Use the ORTHO Dial 'n Spray to treat large areas such as for lawn renovation or to prepare sites for planting flower beds or vegetable gardens. Apply to evenly and thoroughly wet weeds and grasses.

Apply Eraser using any of the following equipment:

- Plastic, aluminum or stainless steel tank sprayer
- ORTHO Dial 'N Spray®
- ORTHO Spray-Ette®
- A hose-end sprayer recommended for weed killers
- Hand-trigger pump sprayer

Cleaning Application Equipment:

To clean sprayer after use, triple rinse sprayer and all sprayer parts with water. Spray rinse water on bare soil or gravel. After thorough cleaning, sprayer can be used for other products. Use the following table to determine the amount of **Eraser** to mix with water. Close cap tightly after use. No need to rinse cap. 1 teaspoon (tsp) 1 tablespoon (Tbs) = 3 tsp.

Where to use:

this label. spot weed treatment in lawns, since Eraser edging landscapes. NOT recommended for ornamental trees, shrubs, renovation/replacement recommendations on replacing a lawn or parts of a lawn, see **For lawn** kills all green plants, including lawn grasses. If brick and gravel walks. Use for trimming plantings, around buildings. Controls weeds in patios, sidewalks, curbs and driveways, around Weed control: Use near fences, in flower beds and paths and

Spot treatments: Direct spray on undesirable weeds and grasses in and around flower beds, ornamental trees, fruit and nut trees, grapevines, shrubs, fences, driveways and walkways. Spray when air is calm. Prevent **Eraser** spray from contacting the leaves, green stems, or exposed roots of plants you like. Use a cardboard or plastic shield to protect desirable plants from spray or drift. **Eraser** will not move in or on the soil to untreated plants. If **Eraser** is used to control weeds around fruit or nut trees or grapevines, wait 21 days before eating the fruit or nuts.

Landscapes: For use in preparing areas for planting of ornamentals, trees, shrubs, desert landscapes, rock gardens, flower beds or similar plantings. Treated areas can be planted 1 day after treatment.

Wildlife areas site preparation: Use **Eraser** to prepare areas for planting wildlife food plots. Exotic or undesirable plants can be controlled with **Eraser** to allow for planting or recovery of native plant species. Spot treatments may be

directed to selectively remove unwanted plants. Avoid spray drift to desirable plants.

For lawn renovation/replacement: Use **Eraser** to kill existing vegetation (weeds and grasses and the old lawn). Apply in spring or fall, when daytime temperatures are at least 60° F for best results. If the lawn is dry, water lawn every other day for 7 days before applying **Eraser**. Do not mow for 7 days before or after treatment. Use 2 1/2 fl oz per gallon of water for each 300 sq ft of area to treat.

Wait 7 days after application to prepare the soil by raking, leveling or rototilling.

Rake up and remove loosened thatch or debris. Work in starter fertilizer and soil amendments, if needed. Level the soil.

Sow new seed according to directions on seed package, or install sod. Grass seed must have good contact with soil to germinate and grow. Use temporary mulch such as straw to conserve moisture. Keep area moist for 2 weeks to establish new lawn. Water as needed.

To Control Brush or Vines: Apply to green and actively growing brush or vines. For plants taller than 5 feet, cut them back and spray the regrowth. Fall applications to brush may delay control to the following season. A second application may be required on hard-to-control species such as blackberry, kudzu, or poison oak. To kill vines growing up a pole, fence or mature

To kill vines growing up a pole, fence or mature tree trunk, cut vine to a height of 3 to 4 feet and spray thoroughly covering remaining vine. If vine is climbing a shrub or immature (green) tree trunk, to avoid damage to these plants, cut vine at base

and treat as directed for stumps or spray regrowth. If spraying regrowth shield shrub and green trunk from drift with a sheet of plastic or cardboard.

Stump Treatment: Stumps can be treated to prevent regrowth. Apply **Eraser** when vegetation is actively growing or immediately (within 5 minutes) after being cut down.

- Cut stump close to the soil surface
- Make 4-5 nail holes into the stump.
- Flood the stump with undiluted product

This treatment will suppress or control many types of woody brush and trees, such as alder, bluegum eucalyptus, madrone, oak, giant reed, saltcedar, sweetgum, and tan oak.

When to replant:

All ornamental flowers, trees and shrubs and the following berries, fruits, vegetables and herbs may be planted <u>1 day</u> after application:

Artichoke (Jerusalem), beans (all), beet greens, blackberry, blueberry, boysenberry, broccoli, brussels sprouts, cabbage (all), carrot, cauliflower, celery, chard (Swiss), chicory, collards, cranberry, currant, dewberry, elderberry, endive, gooseberry, horseradish, huckleberry, kale, kohlrabi, leek, lentils, lettuce, loganberry, mustard greens, okra, olallieberry, onion, parsley, parsnips, potato, radish, rape greens, raspberry (black and red), rhubarb, rutabaga, spinach, sweet potato, turnip and yams.

The following fruits, vegetables and herbs may be planted <u>3 days</u> after application:

Corn, cucumber, eggplant, garlic, gourds, melons (all), peas (all), peppers (all), pumpkin, squash (summer and winter), tomatillo, tomato* (by seed) and watercress.

*Note: Wait 3 days before planting tomatoes from seed and 30 days for rooted tomato transplants. For tomato transplants or vegetables not listed, wait 30 days after spraying before planting into treated soil.

Fruit and Nut Trees, Caneberries and Grapevines: Allow 21 days before the fruits or nuts when using **Eraser** to control weeds around fruit or nut trees, caneberries and grapevines.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Storage and Spill Procedures: Store upright at room temperature. Avoid exposure to extreme temperatures. Store in a locked area out of reach of children and domestic animals. In case of spillage or leakages, soak up with an absorbent material such as sand, sawdust, earth, Fuller's earth, etc. Dispose of with chemical waste.

Pesticide Disposal: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or
